The Company "Evtectika" Minsk, Belarus specializes in the development and manufacture of foundry materials used in the casting from aluminium alloys, copper alloys, cast iron and steel:

- Refining Fluxes and Fluxes with modifying effect for aluminium and copper alloys;
- Fluxes for melting aluminium alloys in the rotary kiln;
- Tableted preparations for degassing and modifying aluminium and copper alloys;
- Separation casting coatings (paints) applied to metal molds for casting;
- Separation casting coatings (lubricants) for casting of aluminium alloys under pressure;
- Non-stick coatings of single molds;

Our aims and objectives:

1. See the exhibition with last achievements in the Foundry technology and equipment.
2. Search new partners and consumers of Foundry materials produced by the Company "Evtectika".
